Virginia Department of Transportation Fredericksburg District - 6 .....	267
Virginia Department of Transportation Northern Virginia District - 9 .....	275

## INTRODUCTION

The purpose of this document is to identify the available resources for use in Incident Management activities within agencies comprising the I-95 Corridor Coalition. The list of resources is aimed at those resources (manpower, equipment, or facilities) available or planned for use in responding to major inter-agency incidents within the Corridor. These incidents are those that involve/impact multiple agencies/jurisdictions that are currently members of the I-95 Corridor Coalition. In addition, this Guide may be used by individual agencies in verifying its key Incident Management resources for use in local as well as regional and Corridor-wide activities.

The source of the inventory is based on information obtained from the individual agencies through interviews, meetings, and review of key materials supplied by the I-95 Corridor Coalition agencies. The information was compiled and listed in a general format for review/critique by representatives of the agencies (typically, key staff responsible for incident management activities). Key information highlighted in the inventory includes the following items:

- List of key contacts (includes phone number, location, and area of coverage) within the agency for inter-agency (regional or Corridor) incidents
- Incident detection techniques (includes method, responsible agency, and hours/area of coverage)
- Incident verification techniques (includes method, responsible agency, and hours/area of coverage)
- List of key contacts (includes phone number, location, agency, and area of coverage) within the agency for local and regional incidents by incident type (as defined by each agency)
- List of dispatch centers (includes location, phone number and other communication means) for State Police
- List of equipment available for use in responding to or handling incidents (includes equipment type, use, and location)
- List of DOT/agency primary offices for area activities (includes district number, area of coverage, location/address, and phone number)
- List of DOT/agency primary maintenance facilities (includes district number, area of coverage, location/address, and phone number)
- List of State Police facilities (includes barracks number, location, and phone number)

- Highway advisory radio facilities and location (includes permanent and portable)
- Variable message sign (VMS) facilities and location (includes permanent and portable)
- List of traffic operations centers and facilities (includes location, function of facility, phone number, other communication means, and center capabilities/features)

The inventory of information for each agency may differ depending on the level of information able to be maintained and the extent of incident management practiced by the agency. As such, while inventories for several agencies may contain greater detail, for other agencies the information is less detailed. However, the inventory displays the needs and features of each agency's specific incident management program.

The information contained in this document is intended for primary use in defining the resources available for handling multi-agency (regional and corridor) incidents and for subsequent input into the Information Exchange Network (IEN) for the Corridor Coalition needs.

Finally, the purpose of this document is to maintain a hard-copy, updateable file record of the resources on a local and corridor-wide basis. Regular update of this inventory and provision for the update will be required as part of the IEN. It is expected that this document will facilitate the incident management process for regional and corridor-wide incidents.

## I-95 Corridor Contacts by State/Agency

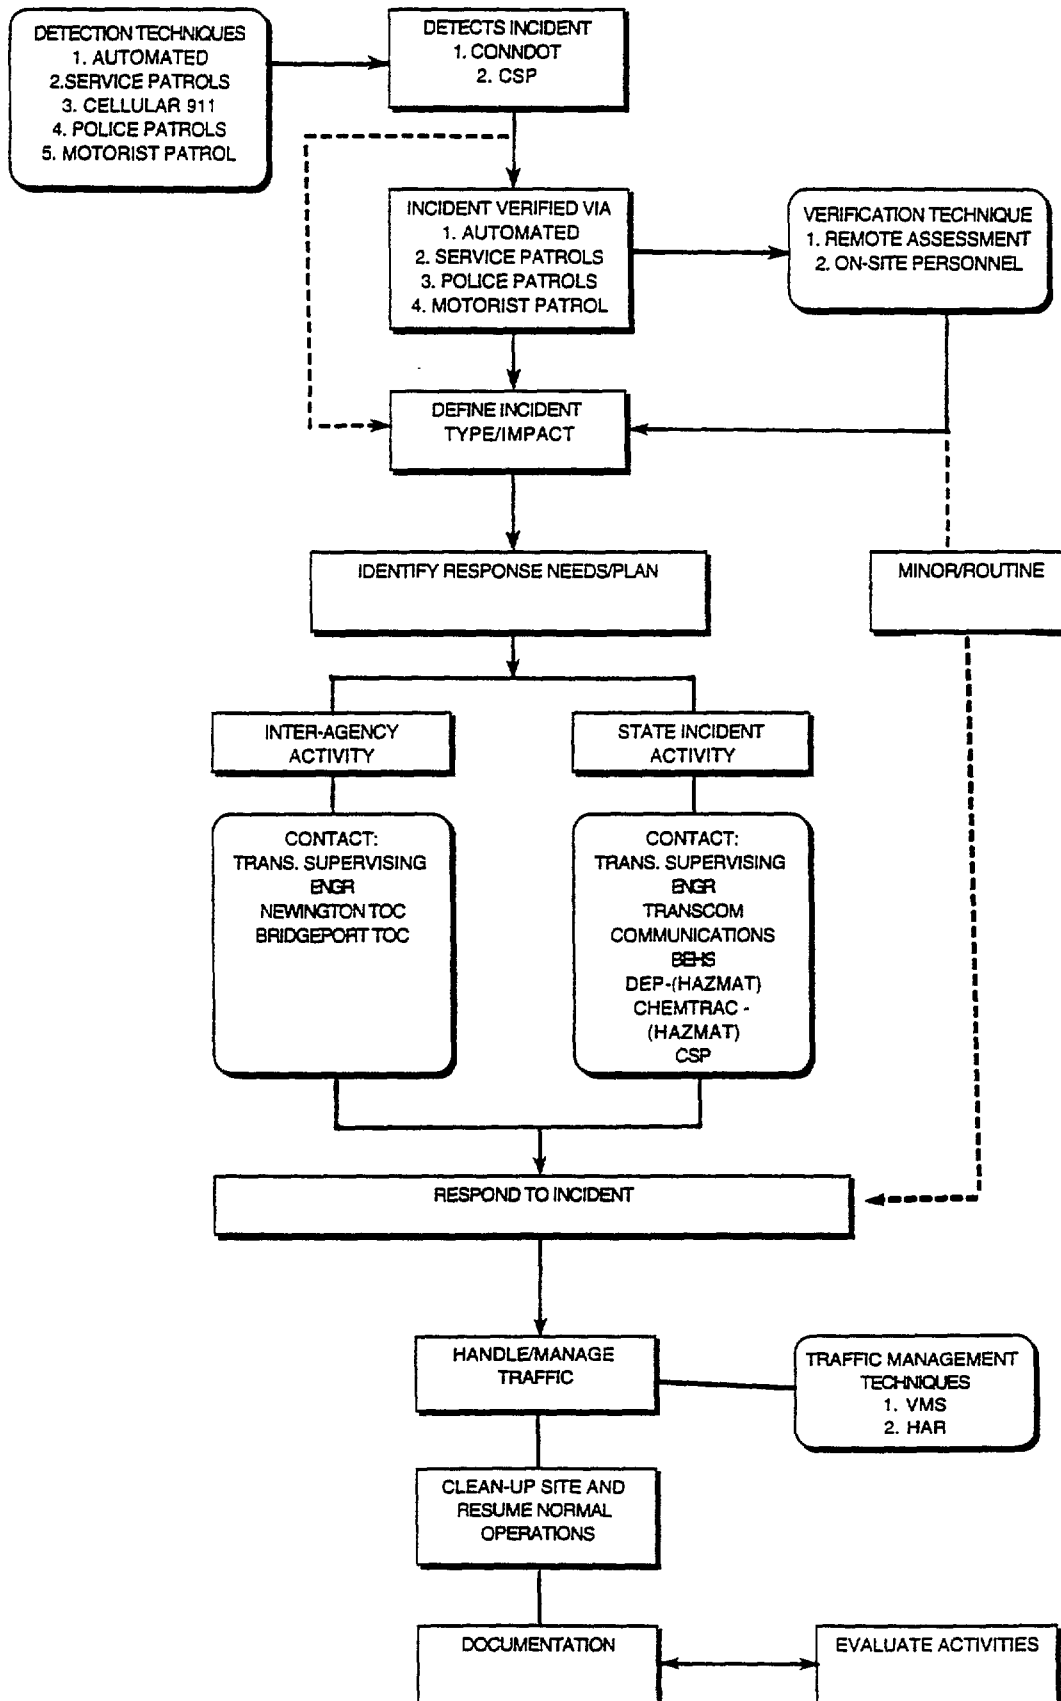

<b>Agency</b>	<b>Proposed Contact</b>	<b>Phone</b>	<b>Fax</b>
Connecticut Department of Transportation	Jim Mona	203-594-3450	203-594-3476
